

Quick Breakdown Instructions

1. Remove top cover and sign

2A . Pending on the age of your machine , You might have **2B** a flange, cone clips or Cone Clip Rev 2 . If you have the style with The flange you will need an 3/16 Allen wrench To remove the set screw, once removed the Cone will slide up and off the pole.

If you have cone clip style you will need an 7/16 wrench To loosen the bolts and pull them away from The pole allowing you to slide the cone up and Off of the pole.

If you have the Cone clip Rev 2 you will simply screw the knob from the cone completely and slide the cone clip Rev 2 from the pole allowing you to slide the cone up and off of the pole.

3. Remove the perf from the catch basin.

4. After removing cone and perf from the pole, you can slide the entire bottom section from the Pole (This may require a helping hand). You have the option to separate the pole and plate by using 2 – 7/16 wrenches to remove nuts and bolts.
